THE SUMMER VISION PROJECT

Seymour Papert

The summer vision project is an attempt to use our summer workers effectively in the construction of a significant part of a visual system. The particular task was chosen partly because it can be segmented into sub-problems which will allow individuals to work independently and yet participate in the construction of a system complex enough to be a real landmark in the development of "pattern recognition".

# Today's agenda

- A brief history of computer vision
- CS231n overview

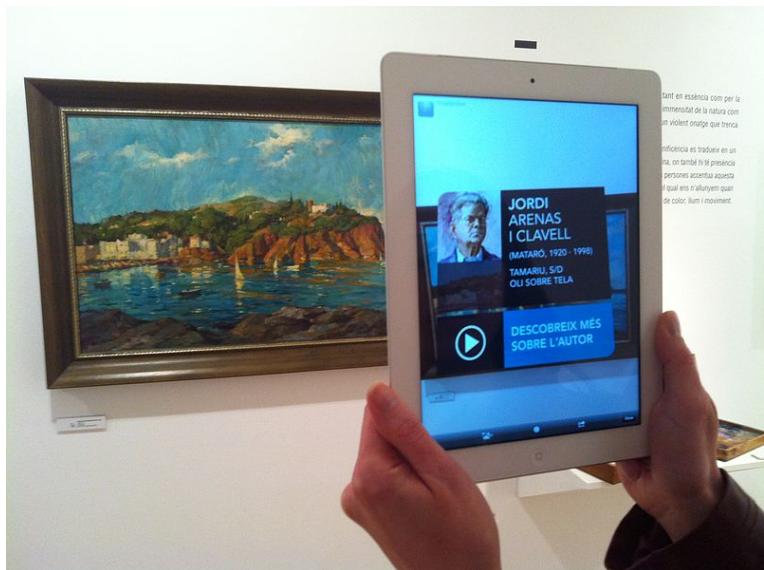

CS231n focuses on one of the most fundamental  
problems of visual recognition –  
*image classification*

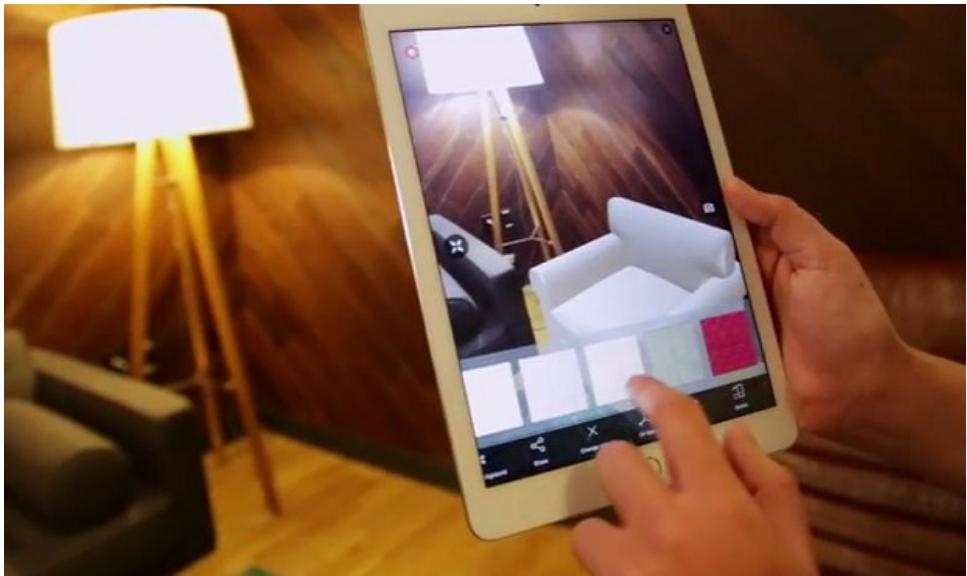

[Image by US Army](#) is licensed under CC BY 2.0

[Image is CCO 1.0](#) public domain

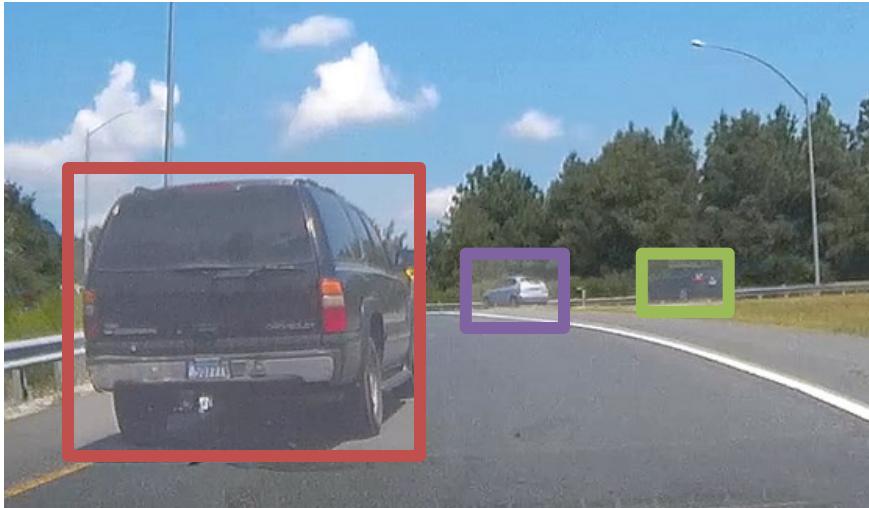

[Image by Kippelboy](#) is licensed under CC BY-SA 3.0

[Image by Christina C.](#) is licensed under CC BY-SA 4.0

There are many visual recognition problems that are related to image classification, such as *object detection, image captioning*

$$PT = 500\text{ms}$$

Some kind of game or fight. Two groups of two men? The man on the left is throwing something. Outdoors seemed like because i have an impression of grass and maybe lines on the grass? That would be why I think perhaps a game, rough game though, more like rugby than football because they pairs weren't in pads and helmets, though I did get the impression of similar clothing. maybe some trees? in the background. (Subject: SM)

# How to Contact Us

- Course Website: <http://cs231n.stanford.edu/>
  - Syllabus, lecture slides, links to assignment downloads, etc
- Piazza: <http://piazza.com/stanford/spring2018/cs231n>
  - Use this for most communication with course staff
  - Ask questions about homework, grading, logistics, etc
  - Use private questions if you want to post code
- Gradescope
  - For turning in homework and receiving grades
- Canvas
  - For watching lecture videos

# Optional Textbook

- Deep Learning by Goodfellow, Bengio, and Courville
- Free online

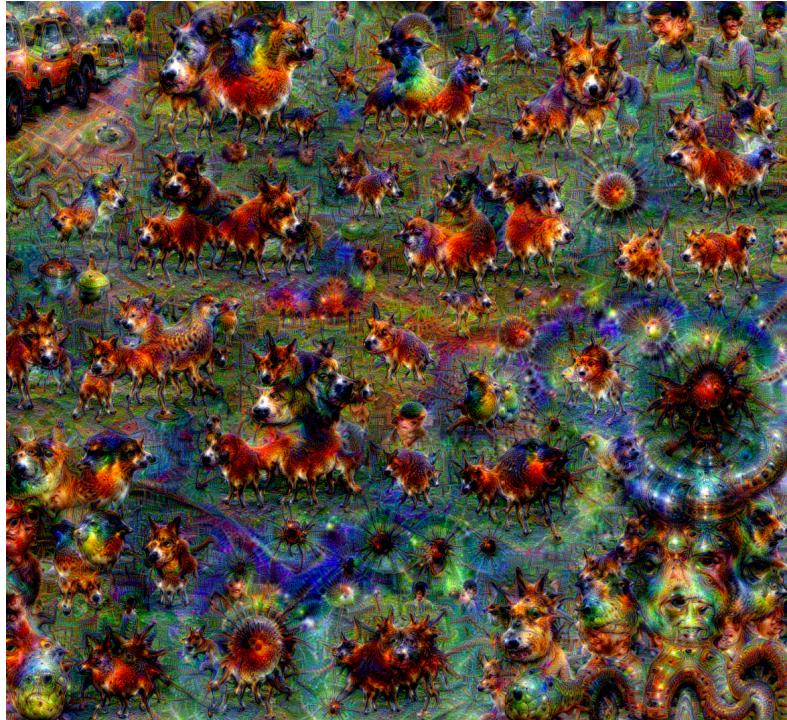

# Our philosophy

- Thorough and Detailed.
  - Understand how to write from scratch, debug and train convolutional neural networks.
- Practical.
  - Focus on practical techniques for training these networks at scale, and on GPUs (e.g. will touch on distributed optimization, differences between CPU vs. GPU, etc.) Also look at state of the art software tools such as TensorFlow, and PyTorch
- State of the art.
  - Most materials are new from research world in the past 1-3 years. Very exciting stuff!

# Our philosophy (cont'd)

- Fun.
  - Some fun topics such as Image Captioning (using RNN)
  - Also DeepDream, NeuralStyle, etc.

# Pre-requisite

- Proficiency in Python, some high-level familiarity with C/C++
  - All class assignments will be in Python (and use numpy), but some of the deep learning libraries we may look at later in the class are written in C++.
  - A Python tutorial available on course website
- College Calculus, Linear Algebra
- Equivalent knowledge of CS229 (Machine Learning)
  - We will be formulating cost functions, taking derivatives and performing optimization with gradient descent.

# Grading Policy

- 3 Problem Sets: **15% × 3 = 45%**
- Midterm Exam: **20%**
- Course Project: **35%**
  - Project Proposal: 1%
  - Milestone: 2%
  - Poster: 2%
  - Project Report: 30%
- Late policy
  - 4 free late days – use up to 2 late days per assignment
  - Afterwards, 25% off per day late
  - No late days for project report

# Collaboration Policy

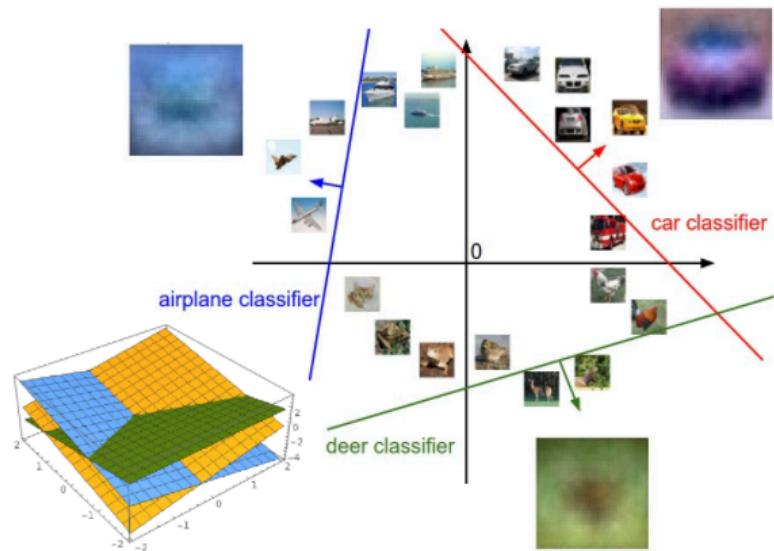

- We follow the Stanford Honor Code and the CS Department Honor Code – read them!
- **Rule 1:** Don't look at solutions or code that are not your own; everything you submit should be your own work
- **Rule 2:** Don't share your solution code with others; however discussing ideas or general strategies is fine and encouraged
- **Rule 3:** Indicate in your submissions anyone you worked with
- Turning in something late / incomplete is better than violating the honor code

# Next Time: Image Classification

K-Nearest Neighbor

Linear Classifier
